### Important notes:

1. We may use fixed and non-fixed income assets including but not limited to bonds, equities and derivatives as our investment strategy, but the Index Interest Rate is determined by the Index Change Rate subject to the Guaranteed Participation Rate, the Cap Rate and the Guaranteed Floor Rate as illustrated above.
2. The Index Interest will only be credited to a Segment on the Segment Maturity Date, which is 12 calendar months from the Segment Start Date. For the avoidance of doubt, there will not be any pro-rata interest to be credited to a Segment before the Segment Maturity Date.

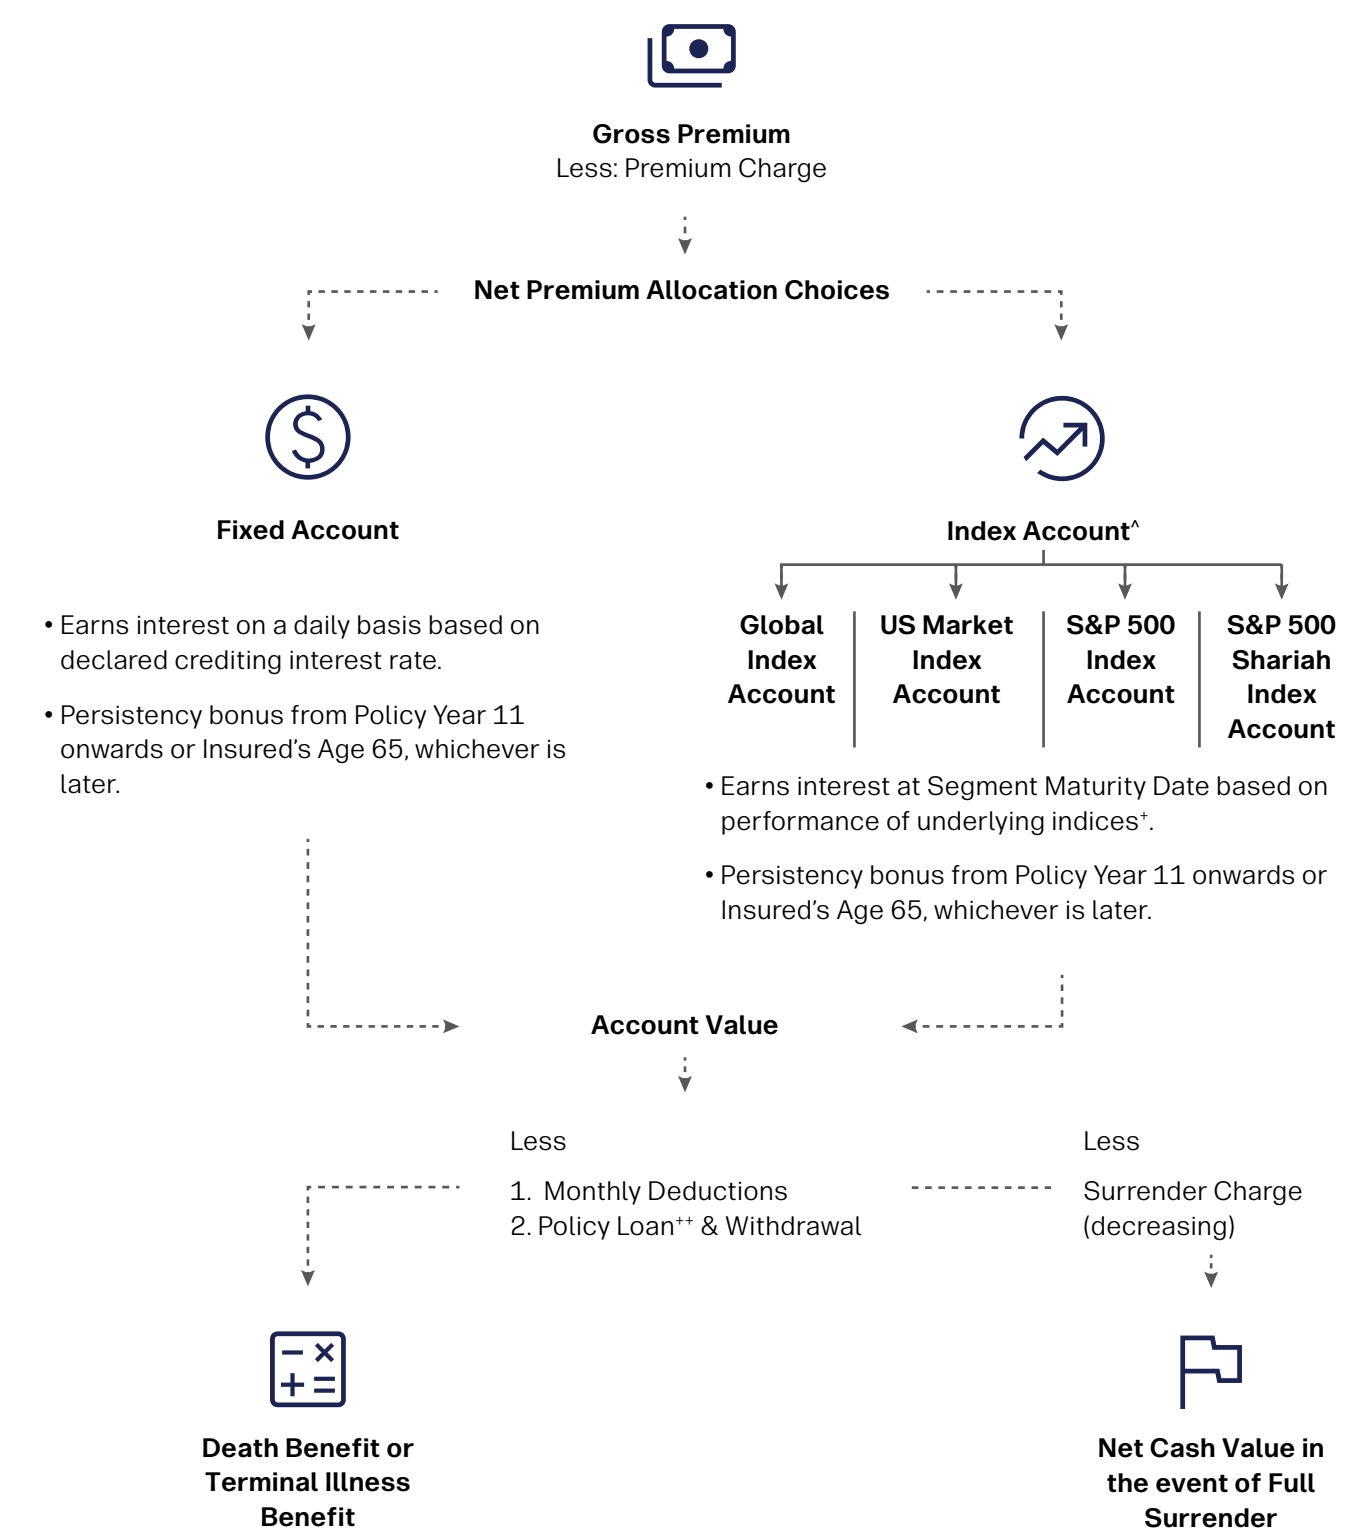

# When will you earn the return from the Index Account?

The respective Index Interest will be credited to the Index Account only after the Segment has reached maturity, which spans across a duration of one year. Segment is used to identify and segregate each fund allocation to each sub-account of the Index Account at different times. It is created on the 15th of each calendar month (i.e. Segment Start Date) and matures on the 15th of the same calendar month next year (i.e. Segment Maturity Date).

**Example: You paid premium on 1 June 2023 and plan to allocate it to the S&P 500 Index Account**

# Putting it all together

<sup>^</sup> Net Premium to be allocated to Index Account in a lump sum will first be allocated to Holding Account before the next Segment Start Date, where it will earn the same crediting interest rate and Persistency Bonus as the Fixed Account. On the next Segment Start Date, the Net Premium will be transferred to the sub-account(s) specified by you.

<sup>+</sup> Index Interest is calculated and credited at Segment Maturity Date only.

<sup>++</sup> For details of the Loan Account, please refer to policy contract.

## Currency risk

The currency of Genesis+ Indexed Universal Life 2 is the US dollar. That means the payments you make and the benefits paid out from the policy are both in US dollars. As the value of the US dollar fluctuates against other currencies, if your home currency is not the US dollar, the payments you make or receive may be worth more or less over time when expressed in your home currency.

## Risk of crediting interest rate adjustment in Fixed Account and Holding Account

Transamerica Life Bermuda determines the declared crediting interest rate (CIR) in the Fixed Account and Holding Account by considering various factors based on the Company's CIR philosophy.

The CIR affects the account value within the Fixed Account and Holding Account of your policy. The CIR of Genesis+ Indexed Universal Life 2 is fixed for the Lock-in Crediting Interest Rate Period. After that, we may increase or decrease the CIR. However, we guarantee that the CIR will not be lower than the Guaranteed Minimum Crediting Interest Rate of 1.50% p.a. Beginning on the Policy Anniversary at the Insured's age 121, the account value in the Fixed Account and Holding Account will accrue interest at the Guaranteed Minimum Crediting Interest Rate.

The account value in the Fixed Account and Holding Account will be affected if the CIR drops, as a lower amount of interest will be added to it.

## Inflation risk

As a result of inflation, the benefits you receive in the future may not be worth as much in relative terms as they are today.

## Policy exclusion for suicide

If the Insured person commits suicide within two years from the later of the Policy Issue Date and the Reinstatement Effective Date (if applicable), we will not pay the Death Benefit. We will only return the premiums you paid for the policy up to that time, less any Withdrawal amount you have made against the policy, any TI Benefit paid and any fees and charges associated with those Withdrawal.

## Exclusions and limitations

These contents provide an overview of the product features and key product risks. Please refer to the policy Application form and policy provisions for the exact terms and conditions and take particular note of those terms where we will not pay the policy benefits.
